PayLink

Invoices that actually get paid on Solana.

paylink.181labs.build

PROBLEM

Getting paid in USDC is still manual work.

01

Freelancers and small businesses want **USDC on Solana**.

02

Their clients hold USDC on **other chains**.

03

Invoices are manual, and payments get **chased** by hand.

SOLUTION

One sentence in. A verified receipt out.

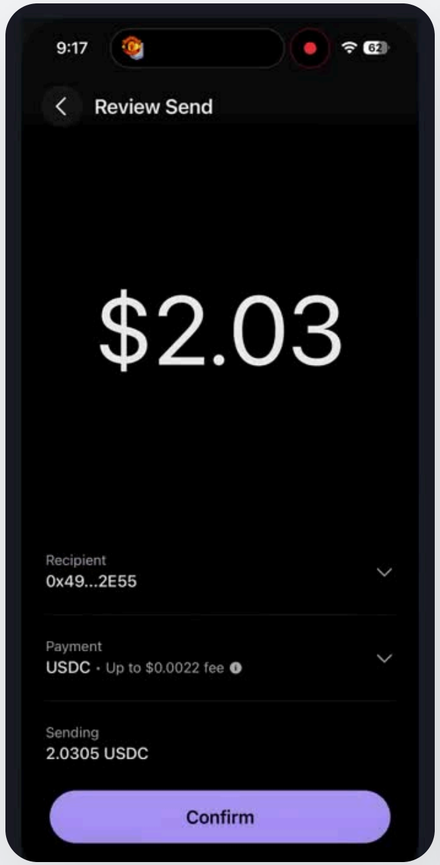

1 **AI invoice from one sentence** — reviewed before issuing

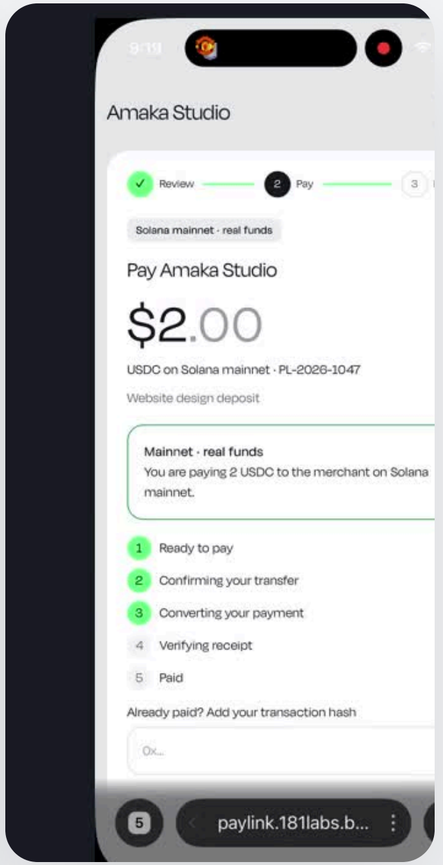

2 **Shareable pay link** sent to the client

3 **Client pays from Base** via Aurora Intents

4 **PayLink independently verifies** the finalized Solana USDC credit before marking paid

5 **Receipt + PDF** for both sides

HOW SOLANA POWERS IT

Settled and verified on Solana mainnet.

Source (reported)

2.030498

USDC on Base

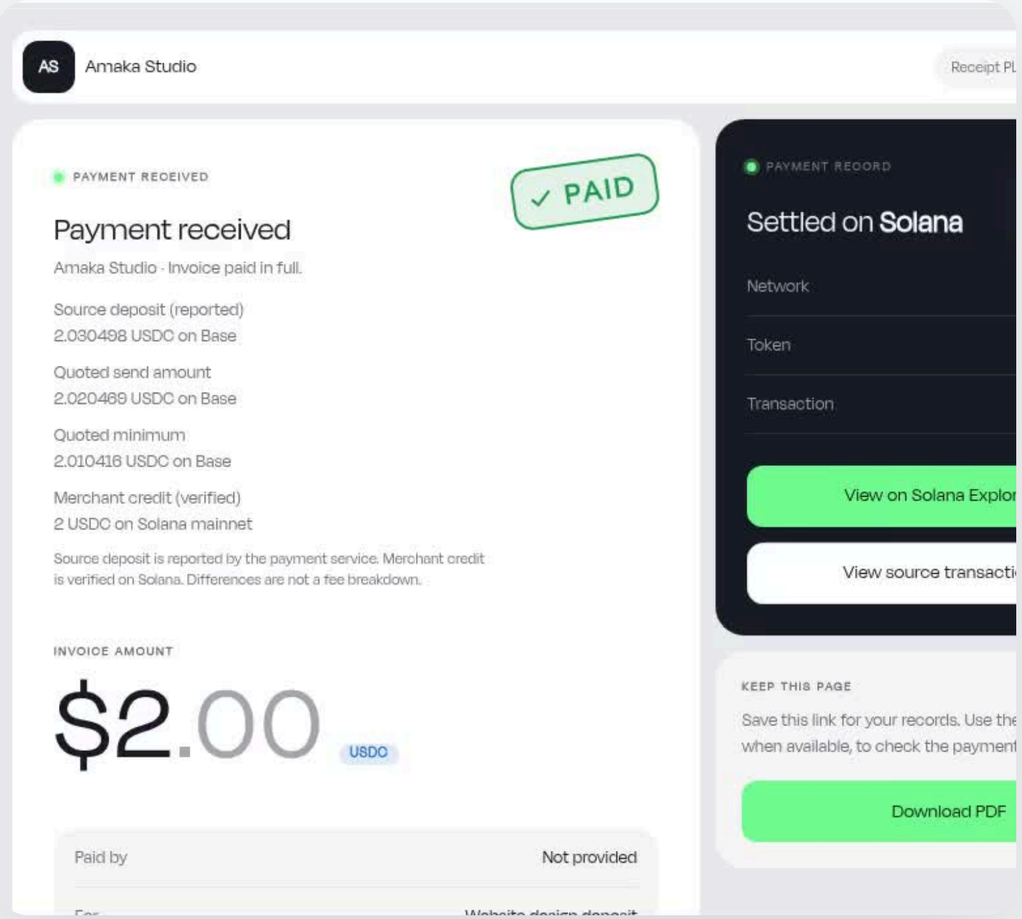

Merchant credit (verified)

2.00

USDC on Solana

— Mainnet USDC settlement
— Finalized-commitment check of the merchant credit
— Fast, cheap finality

Real invoice **PL-2026-1047** · paylink.181labs.build/receipts/rcp_c9715460

X402 FOR AGENTS

The assistant pays per action over HTTP 402.

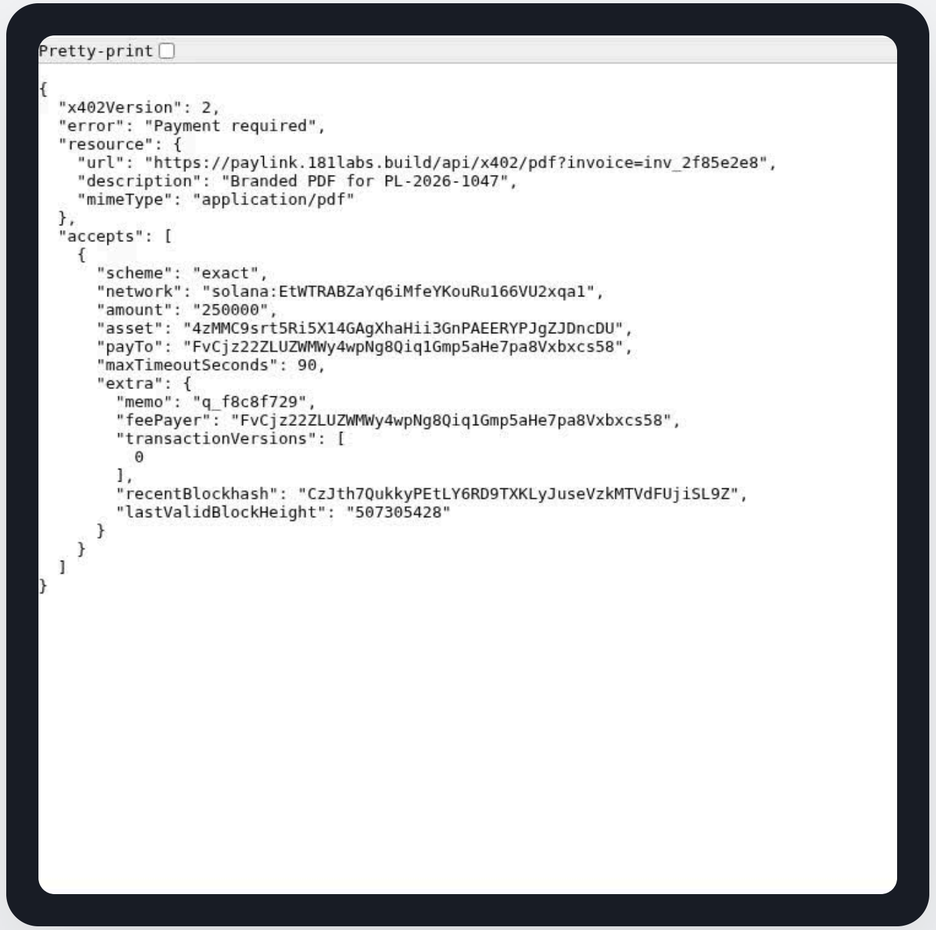

0.25

USDC · branded PDF

0.05

USDC · reminder

— Spend cap the owner controls
— x402 v2, **exact** scheme
— Runs on Solana devnet

TRACKS & BUILD
